

Description

RailClamp® TVS arrays are ultra low capacitance ESD protection devices designed to protect high speed data interfaces. This series has been specifically designed to protect sensitive components which are connected to high-speed data and transmission lines from overvoltage caused by **ESD** (electrostatic discharge), **CDE** (Cable Discharge Events), and **EFT** (electrical fast transients).

The RClamp®7522T has a typical capacitance of only 0.25pF. This allows it to be used on circuits operating in excess of 3GHz without signal attenuation. Each device will protect two data lines and the voltage supply bus in USB applications. Steering diodes serve as backdrive protection on the VBus pin for operation during power-down. The device may also be used to protect up to three high speed data lines in applications such as camera data lines in mobile phones.

The RClamp7522T is in a 5-pin SLP1007N5T package. It measures 1.0 x 0.7mm with a nominal height of 0.40mm. The innovative flow through package design simplifies pcb layout and maximizes signal integrity on high-speed lines.

The combination of small size, low capacitance, and high level of ESD protection makes this device a flexible solution for applications such as camera data lines, MHL, and USB interfaces.

Features

- ◆ ESD protection for high-speed data lines to **IEC 61000-4-2 (ESD) ±25kV (air), ±15kV (contact)**
- ◆ **IEC 61000-4-5 (Lightning) 5A (8/20µs)**
- ◆ **IEC 61000-4-4 (EFT) 40A (5/50ns)**
- ◆ Package design optimized for high speed lines
- ◆ Flow-Through design
- ◆ Very small PCB area: 0.7mm²
- ◆ Protects up to three high-speed lines
- ◆ Backdrive protection on VBus pin
- ◆ Low capacitance: **0.25pF** (typical)
- ◆ Low ESD clamping voltage
- ◆ Solid-state silicon-avalanche technology

Mechanical Characteristics

- ◆ SLP1007N5T 5-pin package (1.0 x 0.7 x 0.40mm)
- ◆ Pb-Free, Halogen Free, RoHS/WEEE Compliant
- ◆ Lead finish: NiPdAu
- ◆ Marking: Marking Code
- ◆ Packaging: Tape and Reel

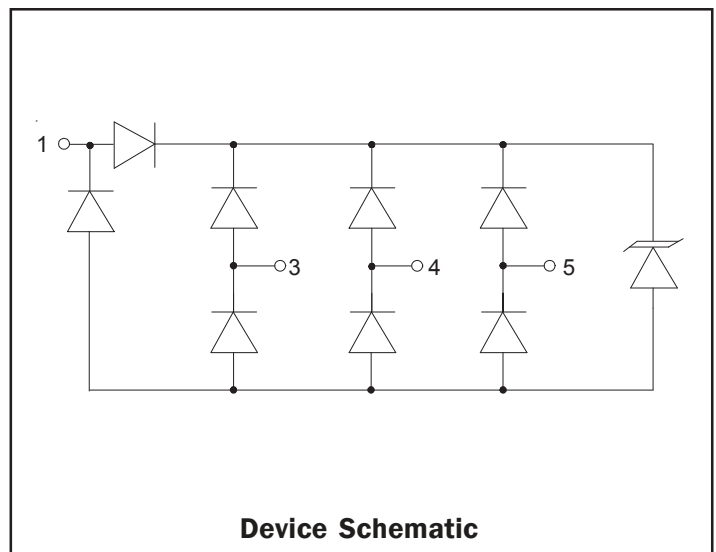

Applications

- ◆ USB 2.0 & USB 3.0
- ◆ Camera Data Lines
- ◆ MHL

Applications Information

Design Recommendations for USB Protection

The RClamp7522T is specifically designed for protection of high-speed interfaces. They present <math><0.40\text{pF}</math> capacitance between any line and ground while being rated to handle >math> \pm 15\text{kV}</math> ESD contact discharges (>math> \pm 25\text{kV}</math> air discharge) as outlined in IEC 61000-4-2. Each device is in a leadless SLP package that occupies a nominal PCB area of 0.7mm^2. The pin configuration is designed such that the traces can be routed straight through the device. The narrow package and flow-through design reduces discontinuity and minimizes impact on signal integrity.

Figure 1 - Circuit Diagram

Design Recommendations for Camera Data Line Protection

Figure 2 shows the recommended pin configuration for protection of camera data lines in mobile phone applications. The camera data lines are connected at pins 3, 4, and 5. The ground connection is made at pin 1. The steering diodes at pin 1 serve to reduce the overall line capacitance.

Figure 2 - Pin Configuration (Top View) for Camera Data Line Protection Applications

Design Recommendations for USB Protection

Figure 3 shows the recommended pin configuration for protection of USB data lines. The voltage supply bus is connected at pin 1. The steering diode pair at pin 1 serve as backdrive protection for operation during power down. Data lines are connected at pins 3 and 4. Ground is connected at pin 5. The ground and data line pins are interchangeable since the ground connection contains a steering diode pair for reduced capacitance.

Assembly Guidelines

The small size of this device means that some care must be taken during the mounting process to insure reliable solder joint. The table below provides Semtech's recommended assembly guidelines for mounting this device. The figure at the right details Semtech's recommended aperture based on the below recommendations. Note that these are only recommendations and should serve only as a starting point for design since there are many factors that affect the assembly process. The exact manufacturing parameters will require some experimentation to get the desired solder application.

Assembly Parameter	Recommendation
Solder Stencil Design	Laser cut, Electro-polished
Aperture shape	Rectangular
Solder Stencil Thickness	0.100 mm (0.004")
Solder Paste Type	Type 4 size sphere or smaller
Solder Reflow Profile	Per JEDEC J-STD-020
PCB Solder Pad Design	Non-Solder mask defined
PCB Pad Finish	OSP OR NiAu
