LH2H Hour Meters

Timers/Time Switches/Counters/Hour Meters

Panasonic
ideas for life

c**UL**us CE

Panel mounting type
One-touch installation type

Panel mounting type
Installation frame type

PC board mounting type

Features

**1. 8.7 mm Character Height
(previously 7 mm .343 inch)**
Easy-to-read character height increased
from 7 mm to 8.7 mm .276 inch to .343
inch.

999999.9 8.7mm
.343inch

2. Plenty of Digits

9999999

← 7 digits →

**3. Select by switch between two time
ranges in a single meter.**
0 to 999999.9h/0 to 3999d23.9h switchable
0 to 999h59m59s/0 to 9999h59.9m switchable
**4. Panel Mounting Type Features 2
Installation Methods**
Comes with very easy one-touch
installation type and also installation
frame type that uses the frame on the
timer/counter. Choose a method that
suits the application.

**5. Battery Replacement Easy on
Environment**
To replace battery simply remove body
for the one-touch installation type, and
remove battery lid for the installation
frame type.
**6. Screw Terminals Designed for
Safety**
Built in finger protection.
**7. Panel Covers Replacable
(Standard color is ash gray.)**
Change the panel design by replacing
with a black panel cover.
**8. Conforms to IP66 Protective
Construction (Only installation frame
type.) (Front panel surface)**
9. Input Methods
1) Non-voltage input method
2) Voltage input method
3) Free voltage input method
**10. Backlight Type Added to Series
and Now 2-color Switchable (green/
red)**
Easy viewing even in dark places and
switchable between green and red
(Voltage input type).
**11. Compliant with UL, c-UL and CE
marking.**

**RoHS Directive compatibility information

Part names

1. Front reset button

Reset the elapsed time. It does not work when the lock switch is ON. Be aware that battery life will decrease if this switch is used frequently.

2. Lock switch (Refer to chart on right.)

Disable the front reset button.

Note) Turn ON at the LCD side (reset disabled) and OFF at the terminal block side (reset enabled).
3. Time range switch (See chart on right).

Switch the time range.

Note) Always press the front reset button when operating the time range switch.

4. Time unit sticker

Unit seals are included in the package. Affix them in accordance with the time range.

	0 to 999999.9h/0 to 3999d23.9h	0 to 999h59m59s/0 to 9999h59.9m
Lock switch (Unit display 1)	(Terminal block side) ↕ (LCD side) — OFF✳ ↕ ON	
Count speed switch (Unit display 2)	(Terminal block side) ↕ (LCD side) — 0 to 999999.9h✳ ↕ 0 to 3999d23.9h	(Terminal block side) ↕ (LCD side) — 0 to 9999h59.9m✳ ↕ 0 to 999h59m59s

Notes) 1. ✳Default setting when shipped.
2. Make the switch setting before installing to panel.

.039 to .177inch
thickness)
Rubber spacer

Note) When installing to a 4.5 mm .177 inch thick panel, remove the rubber spacer first.

When installing the one-touch installation type model, make sure that the installation spring does not pinch the rubber gasket.

To prevent the installation spring from pinching the rubber gasket:

1. Set the rubber gasket on both ends of the installation spring (left and right).

2. Confirm that the installation spring is not pinching the rubber gasket, and then insert and fix the installation spring in place from the rear of the timer unit.

• Terminal layout and wiring diagrams

Start input   ⑮—⑰   ㉖—㉘   Reset input
              ⑭—⑫   ③—①
①-③, ⑫-⑭, ⑮-⑰ and ㉖-㉘ are connected internally.
An external power supply is required.

Input method

1. Standard type
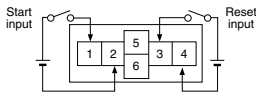

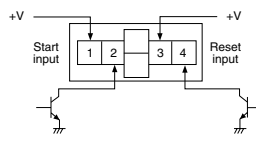

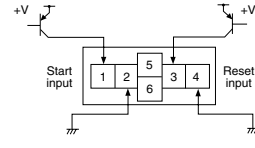

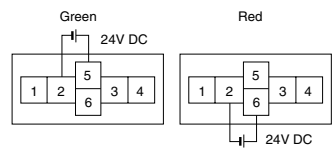

Non-voltage input type			
Panel mounting type		PC board mounting type	
Contact input	Transistor input	Contact input	Transistor input
	NPN transistor		NPN transistor
(② and ④ are connected internally.)	(② and ④ are connected internally.)	3V DC	3V DC

Notes) 1. When using contact input, since current flow is small from terminals ① and ③ on the panel mounting type and terminals ⑮ to ⑰ and ㉖ to ㉘ on the PC board mounting type, please use relays and switches with high contact reliability.
2. When using transistor input, use the following as a guide for which transistors (Tr) to use for inputting. (Collector withstand voltage ≧ 50 V, leakage current < 1 µA)

Voltage input type			Free voltage input type
Contact input	Transistor input		
	NPN transistor	PNP transistor	

Notes) 1. ② and ④. (The input and reset circuits are functionally insulated.)
2. When using transistor (Tr) input, use the right as a guide. (Collector withstand voltage ≧ 50 V, leakage current < 1 µA)
3. Be aware that the application of voltage that exceeds the voltage range of the H level to the count input terminal, and the application of voltage to the reset input terminal, can cause damage to the internal elements.

LH2H

2. Backlight type

Voltage input type			Backlight connection
Contact input	Transistor input		
	NPN transistor	PNP transistor	

Notes) 1. Do not reverse the polarities when connecting the DC voltage for the backlight.
2. ② and ④. (The input and reset circuits are functionally insulated.)
3. When using transistor (Tr) input, use the right as a guide. (Collector withstand voltage ≧ 50 V, leakage current < 1 μA)
4. Be aware that the application of voltage that exceeds the voltage range of the H level to the count input terminal, and the application of voltage to the reset input terminal, can cause damage to the internal elements.

Explanation of operation

1. Time measuring takes place when the start input is ON.
2. When the elapsed (measured) time reaches full scale it returns to "0", and then measuring starts again from "0".
3. When reset input is ON, the display becomes "0". You cannot measure during reset input.
For PC board mounting type the display disappears while the reset input is ON; however, the display reads "0" when the reset input turns OFF.
4. Press the front reset button if you want to perform a manual reset (for panel installation type)
Cautions for use

1. Non-voltage input type
For both panel mounting and PC board mounting types
1) Never apply voltage to the non-voltage input type. This will damage the internal elements.
2) Since the current flow is very small from the start input and reset input terminals (① and ③ on the panel mounting type and terminals ⑮ to ⑰ and ㉖ to ㉘ on the PC board mounting type) please use relays and switches with high contact reliability. When inputting with an open collector of a transistor, use a transistor for small signals in which ICBO is 1 µA or less and always input with no voltage.
3) When wiring, try to keep all the input lines to the start and reset inputs as short as possible and avoid running them together with high voltage and power transmission lines or in a power conduit. Also, malfunctions might occur if the floating capacitance of these wires exceeds 500 pF (10 m 32.808 ft. for parallel wires of 2 mm²). In particular, when using shielded wiring, be careful of the capacitance between wires.

PC board mounting type
1) For external power supply use manganese dioxide or lithium batteries (CR type: 3V).
2) Always reset after external power is applied and confirm that the display reads "0".
3) Make the wiring from the battery to the hour meter unit as short as absolutely possible. Also, be careful of polarity.
4) Calculate battery life with the following formula.
$t = A/I$
  t: battery life [h]
  I: LH2H current consumption [mA]
  A: battery capacity until minimum operation voltage is reached [mAh]
5) Hand solder to the lead terminal. Do not dip solder. With the tip of the soldering iron at 300°C 572°F perform soldering within 3 seconds (for 30 to 60 W soldering iron).

2. Voltage input type
1) Be aware that applying more than 30 V DC to start input terminals ① and ②, and reset input terminals ③ and ④ will cause damage to the internal elements.
2) For external resetting use H level (application of 4.5 to 30 V DC) between reset terminals ③ and ④ of the rear terminals. In this case, connect + to terminal ③ and – to terminal ④. This is the valid polarity; therefore, the hour meter will not work if reversed.

3) When wiring, try to keep all the input lines to the start and reset inputs as short as possible and avoid running them together with high voltage and power transmission lines or in a power conduit. Also, malfunctions might occur if the floating capacitance of these wires exceeds 500 pF (10 m 32.808 ft. for parallel wires of 2 mm²).

3. Free voltage input type
1) Use start input terminals ① and ② for free voltage input and reset terminals ③ and ④ for non-voltage input.
2) Be aware that the application of voltage that exceeds the voltage range of the H level to the start input terminal, and the application of voltage to the reset input terminal, can cause damage to the internal elements.
3) Since the current flow is very small from reset input terminal ③, please use relays and switches with high contact reliability.
4) When inputting a reset with an open collector of a transistor, use a transistor for small signals in which ICBO is 1 µA or less and always input with no voltage.
5) To reset externally, short reset input terminals ③ and ④ on the rear.
6) Input uses a high impedance circuit; therefore, erroneous operation may occur if the influence of induction voltage is present. If you plan to use wiring for the input signal that is 10 m or longer (wire capacitance 120 pF/m at normal temperature), we recommend the use of a CR filter or the connection of a bleeder resistor.

4. How to reset multiple panel mounting type counters all at once (input is the same for count)
Non-voltage input type
Notes) 1. Use the following as a guide for choosing transistors used for input (Tr). Leakage current < 1 µA
2. Use as small a diode (D) as possible in the forward voltage so that the voltage between terminals 3 and 4 during reset input meets the standard value (0.5 V). (At IF = 20 µA, forward voltage 0.1 and higher.)
Voltage input type
Note) Make sure that H (reset ON) level is at least 4.5 V.

5. Backlight luminance
To prevent varying luminance among backlights when using multiple Backlight types, please use the same backlight power supply.

6. Acquisition of CE marking
Please abide by the conditions below when using in applications that comply with EN 61010-1/IEC 61010-1
1) Ambient conditions
• Overvoltage category II, pollution level 2
• Indoor use
• Acceptable temperature and humidity range: –10 to +55°C, 35 to 85%RH (with no condensation at 20°C)
• Under 2000 m elevation
2) Use the main unit in a location that matches the following conditions.
• There is minimal dust and no corrosive gas.
• There is no combustible or explosive gas.
• There is no mechanical vibration or impacts.
• There is no exposure to direct sunlight.
• Located away from large-volume electromagnetic switches and power lines with large electrical currents.
3) Connect a breaker that conforms to EN60947-1 or EN60947-3 to the voltage input section.
4) Applied voltage should be protected with an overcurrent protection device (example: T 1A, 250 V AC time lag fuse) that conforms to the EN/IEC standards. (Free voltage input type)
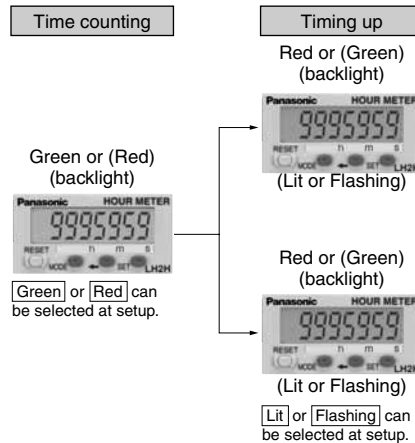

7. Terminal connection
Tighten the terminal screws with a torque of 0.8 N·cm or less.

	RF electromagnetic field immunity	EN61000-4-3	10 V/m AM modulation (80 MHz to 1 GHz) 10 V/m pulse modulation (895 MHz to 905 MHz)
	EFT/B immunity	EN61000-4-4	2 kV (power supply line) 1 kV (signal line)
	Conductivity noise immunity	EN61000-4-6	10 V/m AM modulation (0.15 MHz to 80 MHz)
	Power frequency magnetic field immunity	EN61000-4-8	30 A/m (50 Hz)

LH2H

Part names

1. Front reset key
This key resets the elapsed value. It does not work when the lock switch is ON.

2. Mode key
Use to set preset values or to switch between each mode.

3. Setting key
Used to set digits of preset values or set each mode.

4. Set key
Use to set preset values or to switch between modes.

5. Time unit seal
Unit seals are included in the package. Affix them in accordance with the time range.

6. Lock switch
Disable the operation of the front panel reset key and the mode key. With the lock switch on, $\boxed{Lock}$ is displayed for about two seconds when the reset key or mode switch is operated.

7. Time range switch
Switch the time range.
※: Default setting when shipped.

		LH2HP-FEW-DHK-B-DC24V	LH2HP-FEW-HMK-B-DC24V
⑥	Lock switch (unit display 1)	(Terminal block side) ↕ (LCD side)	OFF※ ↕ ON
⑦	Time range switch (unit display 2)	(Terminal block side) 0 to 999999.9h※ ↕ (LCD side) 0 to 3999d23.9h	(Terminal block side) 0 to 9999h59.9m※ ↕ (LCD side) 0 to 999h59m59s

Notes: 1. Make the switch setting before installing to panel.
2. Please turn the power off if you change the setting of the time range switch when the power is on. The setting will become valid when the power is turned back on.

22 / .866   24 / .945
7 / .276

When installing the one-touch installation type model, make sure that the installation spring does not pinch the rubber gasket.

To prevent the installation spring from pinching the rubber gasket:
1. Set the rubber gasket on both ends of the installation spring (left and right).
2. Confirm that the installation spring is not pinching the rubber gasket, and then insert and fix the installation spring in place from the rear of the timer unit.

• Panel cut out dimensions
The standard panel cut out is shown below.
Use the mounting frame (ATH3803) and the rubber gasket (ATH3804).
(Only installation frame type)
60 min. / 2.362 min.
$45^{+0.5}_{0}$ / $1.772^{+.020}_{0}$
$22.2^{+0.5}_{0}$ / $.874^{+.020}_{0}$

• For connected installation (sealed installation)
(Only installation frame type)

$22.2^{+0.5}_{0}$ / $.874^{+.020}_{0}$
A
$A=(48 \times n - 2.5)^{+1.0}_{0}$
$A=(1.890 \times n - .098)^{+.039}_{0}$
Notes: 1. Suitable installation panel thickness is 1 to 4.5 mm 0.39 to 0.177 inch.
2. Waterproofing will be lost when installing repeatedly (sealed installation).

How to set

1. Preset value setting mode
This is the mode for setting preset values.

MODE — Press the MODE key.   ← — Set the digit.   SET — Set the value.
1) Pressing the MODE key takes you to the preset value setting mode.

`0000 100.0` — Sample display in preset value setting mode (when preset value is 100.0h)
* The factory default preset value is set to 1.0.

2) Pressing the setting key moves the flashing digit left by one. Following the highest digit it returns to the lowest digit and each time the digit setting key is pressed it moves one to the left.
3) Pressing the set key increases the value by one. (After 9 it returns to 0 and then changes to 1, 2, 3, etc.)
4) Pressing the front panel reset key sets the displayed preset value and returns you to the regular operation mode.
5) In the preset value setting mode if you do not operate the digit setting key or the set key for ten seconds or more you will be returned to regular operation. In this case the preset value will not change.

2. Lock mode
This mode prohibits everything except the preset value setting mode.

MODE + SET ········► ← — Press the SET key while pressing the MODE key.   Un-Lock ◄► Lock
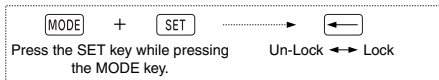

1) Pressing the set key while holding down the mode key takes you to the lock mode.

2) The display reads "Un-Lock" after entering the lock mode (initial setting).

`Un-Lock` — Display after entering lock mode (Example showing "Un-Lock".)
3) Pressing the setting key changes the display between " Lock" and "Un-lock".
`Lock` — (Example showing " Lock".)

4) Pressing the front panel reset key sets the content displayed and returns you to regular operation mode.

Note: You will not be returned to regular operation mode if you do not press the front panel reset key.

5) When the lock mode display reads " Lock", you will not be able to move to the backlight setting mode, the time counting direction setting mode, or the operation setting mode.

3. Backlight setting mode
This is the mode for setting the backlight during time up.

MODE + SET ········► ← — Press the SET key while pressing the MODE key.   Lit red → Flashes green ← Lit green ← Flashes red ◄

1) Pressing the SET key two times while holding down the MODE key takes you to the backlight setting mode.
2) The display in the backlight setting mode reads " LEd"

`LEd` — Display after entering the backlight setting mode.
3) The LED backlight will be red (initial setting).

4) The backlight changes from flashing green to flashing red to lit green and to lit red with each press of the setting key.
5) Pressing the front panel reset key sets the current backlight color and returns you to regular operation mode.

Note: You will not be returned to regular operation mode if you do not press the front panel reset key.

4. Time counting direction setting mode
This is the mode for setting addition or subtraction.

MODE + SET ········► ← — Press the SET key while pressing the MODE key.   Addition ◄► Subtraction
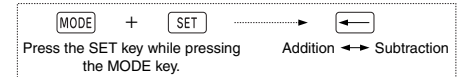

1) Pressing the SET key three times while holding down the MODE key takes you to the time counting direction setting mode.
2) The display after entering the time counting direction setting mode reads " UP" (initial setting).

`UP` — Display after entering time counting direction setting mode (Example showing "UP")

3) Pressing the setting key changes the display to "dn" (subtraction) and pressing it again changes it to "UP" (addition). The display alternates between "dn" and "UP".
`dn` — (Example showing "dn")

4) Pressing the front panel reset key sets the content displayed and returns you to regular operation mode.

Note: You will not be returned to regular operation mode if you do not press the front panel reset key.

LH2H

5. Operation mode

This sets the operation mode.

Press the SET key while pressing the MODE key. → OP-G → OP-B, OP-E ← OP-F
1) Pressing the SET key four times while holding down the MODE key takes you to the operation setting mode.
2) The display reads "OP-G" (Totalizing ON delay) after entering the operation setting mode.

OP-G

3) Pressing the setting key causes the display to change as follows:
OP-B (Signal ON delay)

OP-b
OP-F (Signal flicker)

OP-F
OP-E (Pulse ON delay)

OP-E
OP-G (Totalizing ON delay)
4) Pressing the front panel reset key sets the display content and returns you to regular operation mode.

Note: You will not be returned to regular operation mode if you do not press the front panel reset key.

2) Lock mode

Press the SET key while pressing the MODE key. Un-Lock ←→ Lock

When the lock is set, you cannot enter modes other than backlight setting mode.

3) Backlight setting mode

Press the SET key while pressing the MODE key. → Lit red → Flashes green, Lit green ← Flashes red

Front panel reset key

Regular operation mode

4) Time counting direction setting mode

Press the SET key while pressing the MODE key. Addition ←→ Subtraction

5) Operation setting mode

Press the SET key while pressing the MODE key. → OP-G → OP-B, OP-E ← OP-F

Mode changes as follows by pressing the SET key while holding down the MODE key.
→ Lock mode → Backlight setting mode, Operation setting mode ← Time counting direction setting mode

Please be aware that after doing a front panel reset key and returning to regular operation mode, the preset values, elapsed value and output will be as shown in this table.

	Preset value	Elapsed value	Output change
Lock mode	×	×	×
Backlight setting mode	×	×	×
Time counting direction setting mode	×	Addition: "0" Subtraction: "Preset value"	ON→OFF
Operation setting mode	×	Addition: "0" Subtraction: "Preset value"	ON→OFF

Note: "×" sign: No change

Changing the set time (preset value)

1. It is possible to change the set time even during time delay with the timer. However, be aware of the following points.
1) If the set time is changed to less than the elapsed time (elapsed value) with the time delay set to the addition direction, time delay will continue until the elapsed time reaches full scale, returns to "0 (zero)", and then reaches the new set time.
If the set time is changed to a time above the elapsed time, the time delay will continue until the elapsed time reaches the new set time.

2) If the time delay is set to the subtraction direction, time delay will continue until "0 (zero)" regardless of the new set time.
2. If the set time is changed to "0 (zero)", the hour meter will operate differently depending on the operation mode.
In the G (Totalizing ON delay), B (Signal ON delay), and E (Pulse ON delay) modes, the output turns ON when the start input is ON. However, the output will be OFF while reset is being input.
In the F (Signal flicker) mode, the flicker operation will not work even if start input is turned ON.

Operation mode

Operation mode	Explanation	Time chart
Totalizing ON delay ⒢	• Elapsed value does not clear at power ON. (Power outage countermeasure function) • The output remains ON even after the power is OFF and restarted.	
Signal ON delay ⒝	• Clears elapsed value at power ON. • Time delay starts at start ON and output resets at start OFF. • Time delay starts at reset OFF and power ON while start is ON.	
Signal Flicker ⒡	• Clears elapsed value at power ON. • Time delay starts at start ON. • After timer completion, control output reverses, elapsed value clears, and time delay starts. • Ignores start input during time delay.	
Pulse ON delay ⒠	• Clears elapsed value at power ON. • Time delay starts at start ON. • After timer completion, control output is ON. • Ignores start input during time delay.	

LH2H

Cautions for use

1. Input and output connection
1) Input connection
(1) Contact input
Use highly reliable metal plated contacts. Since the contact's bounce time leads directly to error in the timer operating time, use contacts with as short a bounce time as possible.
(2) Non-contact input (Transistor input)
Connect with an open collector. Use transistors whose characteristics satisfy the criteria given below.
V_{CEO} = Min. 20 V
I_C = Min. 20 mA
I_{CBO} = Max. 6 µA

Also, use transistors with a residual voltage of less than 2 V when the transistor is on.
* The short-circuit impedance should be less than 1 kΩ.
(When the impedance is 0 Ω, the current coming from the start input terminal is approximately 5 mA and from the reset input terminal is approximately 1.5 mA.) Also, the open-circuit impedance should be more than 100 kΩ.
(3) Input wiring
When wiring, use shielded wires or metallic wire tubes, and keep the wire lengths as short as possible.

2) Output connection
Since the transistor output of hour meter is insulated from the internal circuitry by a photo-coupler, it can be used as an NPN output or PNP (equal value) output.

As NPN output
As PNP output
2. Self-diagnosis function
If a malfunction occurs, one of the following displays will appear.

Display	Contents	Output condition	Restoration procedure	Preset values after restoration
Err-00	Malfunctioning CPU	OFF	Enter front reset key or restart hour meter	Preset value at start-up before the CPU malfunction occurred
Err-01	Malfunctioning memory*			0

* Includes the possibility that the EEP-ROM's life has expired.

3. Power failure memory
The EEP-ROM is overwriting with the following timing.

Operation mode	Overwrite timing
G (Totalizing ON delay) mode	Change of preset value or when power is OFF after start and reset input turns ON
Other modes	When power is OFF after changing preset value

4. Terminal connection
1) When wiring the terminals, refer to the terminal layout and wiring diagrams and be sure to perform the wiring properly without errors.
Tighten the terminal screws with a torque of 0.8 N·cm or less. The screws are M3.5.
An external power supply is required in order to run the main unit.
Power should be applied between terminals (1) and (2). Terminal (1) acts as the positive connection and terminal (2) as the negative.

Operating voltage
2) After turning the hour meter off, make sure that any resulting induced voltage or residual voltage is not applied to power supply terminals (1) through (2). (If the power supply wire is wired parallel to the high voltage wire or power wire, an induced voltage may be generated at the power supply terminal.)
3) Have the power supply voltage pass through a switch or relay so that it is applied at one time.

Compliance with the CE marking
• EMC Directive (89/336/EEC)
The LH2H Preset Hour Meter conforms to the EMC Directive as a simple hour meter.
Applicable standards: EN61000-6-4, EN61000-6-2

PRECAUTIONS IN USING THE LH2H SERIES

Cautions for use

1. Insulation sheet
Before using a panel mounting type, please pull and remove the insulation sheet in the direction of the arrow.
In consideration that the product might be stored for long periods without being used, an insulation sheet is inserted before shipping. Remove the insulation sheet and press the front reset button.

• LH2H hour meter (one-touch installation type)

Insulation sheet   Reset button

• LH2H hour meter (installation frame type)

Insulation sheet   Reset button
2. Waterproof construction
• LH2H hour meter (installation frame type)
The operation part of the panel installation type (installation frame type) is constructed to prevent water from entering the unit and a rubber gasket is provided to prevent water from entering the gap between the unit and the panel cutout.
There must be sufficient pressure applied to the rubber gasket to prevent water from entering.
Be sure to use the mounting screws when installing the mounting frame (ATH3803).
Note: The one-touch installation type is not waterproof.

Mounting frame (ATH3803)
• LH2H preset hour meter
1) When using the waterproof type (IP66: panel front only), install the hour meter to the front plate with mounting frame ATH3803 (sold separately) and rubber gasket ATH3804 (sold separately). Be sure to tighten using mounting screws.

Mounting frame (ATH3803)

Rubber gasket (ATH3804)
When installing the mounting frame and rubber gasket please remove the pre-attached o-ring.

2) Panel installation order
  (1) Remove o-ring.
  (2) Place rubber gasket.
  (3) Insert hour meter into panel.
  (4) Insert mounting frame from the rear.
  (5) Secure with mounting screws (two locations)

3. Do not use in the following environments
1) In places where the temperature changes drastically.
2) In places where humidity is high and there is the possibility of dew.
(When dew forms the display may vanish and other display errors may occur.)

4. Conditions of use
1) Do not use on places where there is flammable or corrosive gas, lots of dust, presence of oil, or where the unit might be subject to strong vibrations or shocks.
2) Since the cover is made of polycarbonate resin, do not use in places where the unit might come into contact with or be exposed to environments that contain organic solvents such as methyl alcohol, benzene and thinner, or strong alkali substances such as ammonia and caustic soda.

5. Cautions regarding battery replacement
1) Remove wiring before replacing the battery. You may be electrocuted if you come into contact to a part where high voltage is applied.
2) Make sure you are not carrying a static electric charge when replacing the battery.
3) Battery replacement procedure
  For LH2H hour meter (one-touch installation type)
  (1) Remove the up/down hook of the case using a tool.
  (2) Pull the unit away from the case.
  (3) Remove the battery from the side of the unit. Do not touch the display or other parts.
  (4) Before inserting wipe clean the surface of the new battery.
  (5) Insert the new battery with the "+" and "–" sides in the proper position.
  (6) After replacing the battery, return the unit to the case. Verify that the hook of the case has properly engaged.
  (7) Before using, press the reset button on the front.

Tool
LH2H

For LH2H hour meter
(installation frame type)
(1) Remove the battery cover from the case.
(2) Remove the battery from the side of the case. The battery will come loose if you put the battery side face down and lightly shake the unit.
(3) Before inserting wipe clean the surface of the new battery.
(4) Insert the new battery with the "+" and "–" sides in the proper position.
(5) After replacing the battery, return the battery cover to the case. Verify that the hook of the battery cover is properly engaged.
(6) Before using press the reset button on the front.

"+" side

"–" side
Options

1. Accessories (for LH2H hour meter)
Panel cover (black)

Part No.: ATH3801
You can change the design of the front panel by replacing it with this black panel cover. The counter comes with an ash gray panel cover as standard.
Note: No panel cover option (black) is available for the LH2H preset hour meter.

2. Lithium battery (3 V)

Part No.: ATH3802
Packaged with the LH2H (excluding the PC board mounting type).

⚠ **Warning**
• Make sure the "+" and "–" polarities are positioned correctly. • Do not throw the old battery into a fire, short circuit it, take it apart, or allow it to come into contact with heat. • The battery is not rechargeable.

3. Installation parts
Mounting frame
Suitable for installation frame type LH2H hour meter and LH2H preset hour meter
Part No.: ATH3803
Packaged with the mounting bracket type LH2H hour meter

Rubber gasket
Suitable for installation frame type LH2H hour meter and LH2H preset hour meter

Part No.: ATH3804
Packaged with the mounting bracket type LH2H hour meter

HOUR METERS SELECTOR CHART

Types	DIN 48 × 48 size Hour Meters				
Name of product	TH14 Hour Meters	TH24 Hour Meters	TH40 Hour Meters	TH50 Hour Meters	TH70 Hour Meters

PRECAUTIONS IN USING THE HOUR METERS

1. Frequency setting

Frequency is specified for AC motor-driven hour meters. Before installing, be sure to check your local power frequency.

2. Connections

• TH13,23,14,24,40,50,63,64

	For measuring energized time of load	For measuring operation time of load
Single phase	Hour meter / Load	Hour meter / Switch (Linked with clutch) / Load
Three phases	Hour meter / Load	Hour meter / Switch (Linked with clutch) / Load
Note) Make the connection with the accompanying flat connector first and then with the hour meter's terminal (#187). In such case, be sure to cover the connection with the accompanying insulating sleeve.

• TH70, TH8

Lead wire / DC motor type hour meter / DC power source / Load
Note) Solder the lead wires in position.

3. Safety precautions

Do not use the hour meters in the following places.
• Where ambient temperature is below –10° or above +50°C
• In wet, dusty or gaseous environments
• Where exposed to vibrations and shocks
• Outdoors, or where exposed to rain or direct sunlight

4. Compliant with CE.

• LH2H
  Ambient conditions:
  Overvoltage category III, contamination factor 2, indoor use. Ambient temperature and humidity –10 and +55°C and 35% to 85%RH respectively.
• TH13, 23, 14, 24, 40, 50, 63, 64
  Ambient conditions:
  Overvoltage category II, contamination factor 2, indoor use. Ambient temperature and humidity –10 and +50°C and below 85%RH respectively.

5. Reset-type hour meter

• Precautions for use
  If the number indications are off before use, press the reset button and confirm that all zeroes ("0") are displayed.
• Resetting caution
  Exercise due caution as an insufficient amount of pressure on the reset button may result in abnormal readings.

6. Acquisition of CE marking

Please abide by the conditions below when using in applications that comply with EN 61010-1/IEC 61010-1
1) Ambient conditions
    • Overvoltage category II, pollution level 2
    • Indoor use
    • Acceptable temperature and humidity range: -10 to +55°C, 35 to 85%RH (with no condensation at 20°C)
    • Under 2000 m elevation
2) Use the main unit in a location that matches the following conditions.
    • There is minimal dust and no corrosive gas.
    • There is no combustible or explosive gas.
    • There is no mechanical vibration or impacts.
    • There is no exposure to direct sunlight.
    • Located away from large-volume electromagnetic switches and power lines with large electrical currents.
3) Connect a breaker that conforms to EN60947-1 or EN60947-3 to the voltage input section.
4) Applied voltage should be protected with an overcurrent protection device (example: T 1A, 250 V AC time lag fuse) that conforms to the EN/IEC standards. (Free voltage input type)

DISCONTINUED MODELS AND RECOMMENDED SUBSTITUTES

FOREIGN SPECIFICATIONS OVERVIEW

1. International Standards
IEC standard

International Electrotechnical Commission
By promoting international cooperation toward all problems and related issues regarding standardization in the electrical and electronic technology fields, the IEC, a non-governmental organization, was started in October, 1908, for the purpose of realizing mutual understanding on an international level. To this end, the IEC standard was enacted for the purpose of promoting international standardization.

2. North America

UL (Underwiters Laboratories Inc.)
This is a non-profit testing organization formed in 1894 by a coalition of U.S. fire insurance firms, which tests and approves industrial products (finished products). When electrical products are marketed in the U.S., UL approval is mandated in many states, by state law and city ordinances. In order to obtain UL approval, the principal parts contained in industrial products must also be UL-approved parts.
UL approval is divided into two general types. One is called "listing" (Fig. 1), and applies to industrial products (finished products). Under this type of approval, products must be approved unconditionally. The other type is called "recognition" (Fig. 2), and is a conditional approval which applies to parts and materials.

LISTING MARK

Fig. 1

RECOGNITION MARK

Fig. 2

CSA (Canadian Standards Association)
This was established in 1919 as a non-profit, non-governmental organization aimed at promoting standards. It sets standards for industrial products, parts, and materials, and has the authority to judge electrical products to determine whether they conform to those standards. The CSA is the ultimate authority in the eyes of both the government and the people in terms of credibility and respect. Almost all states and provinces in Canada require CSA approval by law, in order to sell electrical products. As a result, electrical products exported from Japan to Canada are not approved under Canadian laws unless they have received CSA approval and display the CSA mark. Approval is called "certification", and products and parts which have been approved are called "certified equipment", and display the mark shown in Fig. 3. The mark shown in Fig. 4 is called the "Component Acceptance" mark, and indicates conditional approval which is applicable to parts. The C-UL mark shown in Fig. 5 (finished products) and Fig. 6 (parts) indicates that the product has been tested and approved in UL laboratories, based on UL and CSA standards, through mutual approval activities.

Certification

Fig. 3

Component Acceptance

Fig. 4

Fig. 5

Fig. 6

3. Europe
EN standard

European Standards/Norme Europeennee (France)/Europaishe Norm (Germany)
Abbreviation for European Standards. A unified standard enacted by CEN/CENELEC (European Standards Committee/European Electrical Standards Committee). EU and EFTA member nations employ the content of the EN standards into their own national standards and are obligated to abolish those national standards that do not agree with the EN standards.

(1) Germany

VDE (Verband Deutscher Elektrotechniker)
The VDE laboratory was established mainly by the German Electric Technology Alliance, which was formed in 1893. It carries out safety experiments and passes approval for electrical devices and parts. Although VDE certification is not enforced under German law, punishment is severe should electrical shock or fire occur; therefore, it is, in fact, like an enforcement.

TÜV (Technischer Überwachungs-Verein)
TÜV is a civilian, non-profit, independent organization that has its roots in the German Boiler Surveillance Association, which was started in 1875 for the purpose of preventing boiler accidents. A major characteristic of TÜV is that it exists as a combination of 14 independent organizations (TÜV Rheinland, TÜV Bayern, etc.) throughout Germany. TÜV carries out inspection on a wide variety of industrial devices and equipment, and has been entrusted to handle electrical products, as well, by the government. TÜV inspection and certification is based mainly on the VDE standard.
TÜV certification can be obtained from any of the 14 TÜVs throughout Germany and has the same effectiveness as obtaining VDE certification.

4. Shipping Standards
(1) Lloyd's Register of Shipping

Standards from the Lloyd's Register shipping association based in England. These standards are safety standards for environmental testing of the temperature and vibration tolerances of electrical components used for UMS (unmanned machine rooms in marine vessels) applications. These standards have become international standards for control equipment in all marine vessel applications. No particular action is taken to display the conformation to these standards on the products.

5. Pilot Duty

One of the specifications in the "UL508 Industrial Control Equipment" regulations at UL (Underwriters Laboratories Inc.), has to do with the grade of contact control capacity by NEMA (National Electrical Manufacturers Association) standards. By obtaining both UL and CSA approval for this grade, the product becomes authorized publicly.

What are EN standards?

An abbreviation of Norme Europeenne (in French), and called European Standards in English. Approval is by vote among the CEN/CENELEC member countries, and is a unified standards limited to EU member countries, but the contents conform to the international ISO/IEC standards.

If the relevant EN standard does not exist, it is necessary to obtain approval based on the relevant IEC standard or, if the relevant IEC standard does not exist, the relevant standard from each country, such as VDE, BS, SEMKO, and so forth.

CE markings and EC directives

The world's largest single market, the European Community (EC) was born on 1 January 1993 (changing its name to EU in November 1993. It is now always expressed as EU, apart from EC directives.) EU member country products have always had their quality and safety guaranteed according to the individual standards of each member country. However, the standards of each country being different prevented the free flow of goods within the EU. For this reason, in order to eliminate non-tariff barriers due to these standards, and to maximize the merits of EU unification, the EC directives were issued concomitant to the birth of the EU.

The EN standards were established as universal EU standards in order to facilitate EU directives. These standards were merged with the international IEC standards and henceforth reflect the standards in all countries. Also, the CE markings show that products conform to EC directives, and guarantee the free flow of products within the EC.

Appropriate EC directives for control equipment products

The main EC directives that are to do with machinery and electrical equipment are the machinery directive, the EMC directive, the low voltage directive, and the telecom directive. Although these directives have already been issued, the date of their enactment is different for each one. The machinery directive was 1 January 1995. The EMC directive was 1 January 1996, and the low voltage directive was enacted from 1 January 1997. The telecom directive was established by the separate CTR (Common Technology References.)
