

MAX2692/MAX2695

WLAN/WiMAX Low-Noise Amplifiers

General Description

The MAX2692/MAX2695 low-noise amplifiers (LNAs) are designed for WLAN/WiMAX® applications. Designed in Maxim's advanced SiGe process, the devices achieve high gain and low noise figure while maximizing 3rd-order intercept point.

The devices operate from a +1.6V to +3.6V single supply. The optional shutdown feature in the devices reduces the supply current to less than 10µA. The devices are available in a very small, lead-free, RoHS-compliant, 0.86mm x 0.86mm wafer-level package (WLP).

Applications

- Smart Phones
- Notebook PCs/Tablets
- Industrial WLAN/WiMAX
- Embedded Modules
- Automotive

Features

- ◆ 2.5GHz WLAN (MAX2692)
- ◆ 3.7GHz WiMAX (MAX2695)
- ◆ High-Power Gain: 18dB (MAX2692)
- ◆ Low Noise Figure: 1.1dB (MAX2692)
- ◆ High-Input-IP3: -3dBm (MAX2695)
- ◆ Integrated 50Ω Output Matching Circuit
- ◆ Low Supply Current: 4.0mA
- ◆ Low Bill of Materials: One Inductor, Two Capacitors
- ◆ Small Footprint: 0.86mm x 0.86mm

Ordering Information appears at end of data sheet.

WLAN/WiMAX Low-Noise Amplifiers

ABSOLUTE MAXIMUM RATINGS

V_{CC} to GND.....	-0.3V to +3.9V	Operating Temperature Range	-40°C to +85°C
RFOUT to GND.....	-0.3V to (operating V_{CC} + 0.3V)	Junction Temperature	+150°C
Maximum RF Input Power	+5dBm	Storage Temperature Range.....	-65°C to +160°C
Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)		Soldering Temperature (reflow)	+260°C
WLP (derates 9.7mW/°C above +70°C)	776mW		
Maximum Current into RF Input.....	10mA		

Note 1: Refer to Application Note 1891: *Wafer-Level Packaging (WLP) and its Applications*.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

DC ELECTRICAL CHARACTERISTICS

(MAX2692/MAX2695 EV kit, $V_{CC} = 1.6\text{V}$ to 3.6V , $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$, no RF signals are applied. Typical values are at $V_{CC} = 2.85\text{V}$ and $T_A = +25^\circ\text{C}$, unless otherwise noted.) (Note 2)

PARAMETER	CONDITIONS		MIN	TYP	MAX	UNITS
Supply Voltage			1.6	2.85	3.6	V
Supply Current	$\overline{\text{SHDN}} = \text{high}$	MAX2692	4.0			mA
		MAX2695	4.0			
	Shutdown mode, $V_{\overline{\text{SHDN}}} = 0\text{V}$				10	μA
Digital Input Logic-High	(Note 3)		1.2			V
Digital Input Logic-Low	(Note 3)				0.45	V

AC ELECTRICAL CHARACTERISTICS

(MAX2692/MAX2695 EV kit, $V_{CC} = 1.6\text{V}$ to 3.6V , $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$, MAX2692 $f_{\text{RFIN}} = 2.45\text{GHz}$, MAX2695 $f_{\text{RFIN}} = 3.5\text{GHz}$. Typical values are at $V_{CC} = 2.85\text{V}$ and $T_A = +25^\circ\text{C}$, unless otherwise noted.) (Note 3)

PARAMETER	CONDITIONS		MIN	TYP	MAX	UNITS
RF Frequency	MAX2692 (WLAN)		2.45			GHz
	MAX2695 (WiMax)		3.5

Bump Configuration

Bump Description

BUMP	NAME	FUNCTION
A1	V _{CC}	Supply Voltage. Bypass to ground with a 10pF capacitor as close as possible to the IC.
A2	RFOUT (SHDN)	RF Output/ $\overline{\text{SHDN}}$ Input. RFOUT is internally matched to 50 Ω and pulled up to V _{CC} through a 25k Ω resistor. $\overline{\text{SHDN}}$ is shared with the RFOUT bump. The devices are in active mode by default once V _{CC} is applied. RFOUT($\overline{\text{SHDN}}$) can be pulled to a DC low externally to shut down the IC.
B1	RFIN	RF Input. Requires a DC-blocking capacitor and external matching components.
B2	GND	Ground. Connect to the PCB ground plane.

Detailed Description

The MAX2692/MAX2695 are LNAs designed for WLAN/WiMax applications. The devices feature an optional power-shutdown control mode to eliminate the need for an external supply switch. The devices achieve high gain, low noise figure, and excellent linearity.

Input and Output Matching

The devices require an off-chip input matching. Only an inductor in series with a DC-blocking capacitor is needed to form the input matching circuit. The [Typical Operating Circuit](#) shows the recommended input-matching network. These values are optimized for the best simultaneous gain, noise figure, and return loss performance. The

devices integrate an on-chip output matching to 50 Ω at the output, eliminating the need for external matching components. [Table 1](#) and [Table 2](#) list typical device S parameters and K_f values. Typical noise parameters are shown in [Table 3](#) and [Table 4](#).

Shutdown

The devices include an optional shutdown feature to turn off the entire chip. The devices are placed in active mode by default once V_{CC} is applied, due to the on-chip pull-up resistor to V_{CC} at the RFOUT bump (shared with the $\overline{\text{SHDN}}$ input). To shut down the part, apply a logic-low to the RFOUT bump through an external resistor with an adequate value, e.g., 25k Ω , in order not to load the RF output signal during active operation.

Applications Information

A properly designed PCB is essential to any RF micro-wave circuit. Use controlled-impedance lines on all high-frequency inputs and outputs. Bypass V_{CC} with decoupling capacitors located close to the device. For long V_{CC} lines, it may be necessary to add decoupling capacitors. Locate these additional capacitors further away from the device package. Proper grounding of the GND bump is essential. If the PCB uses a topside RF ground, connect it directly to the GND bump. For a board where the ground is not on the component layer, connect the GND bump to the board with multiple vias close to the package.
